

# Summary of Annual Environmental & Fisheries Report

Following the one-year anniversary of being awarded an offtake contract by the New Jersey Board of Public Utilities ("BPU"), Attentive Energy submitted its first Annual Environmental and Fisheries Report for the Attentive Energy Two Project (the "Project") to the BPU. In February 2026, Attentive Energy submitted its second Annual Environmental and Fisheries Report summarizing key changes during calendar year 2025.

The Project is currently in the development phase, and since the award, Attentive Energy has worked directly with key research partners to further develop its Fisheries and Environmental Monitoring and Research Program. This program includes research and monitoring efforts for marine mammals, avian and bat species, fisheries, and oceanographic elements.

As Attentive Energy continues to develop the required documents for the federal and state permitting processes, it is incorporating the most recent applicable guidance into Project planning. Attentive Energy intends to adopt as many of the avoidance, minimization, and mitigation measures in the New York Bight Final Programmatic Environmental Impact Statement ("PEIS") as is feasible. The PEIS, other approved offshore wind projects, and progress with the Fisheries and Environmental Monitoring and Research Program have guided Attentive Energy's development of its Annual Environmental and Fisheries Report. Additionally, Attentive Energy continues to explore infrastructure monitoring measures for the Project.

These environmental/fisheries reports, which cover best management practices, monitoring and mitigation plans, and more, will be updated annually and provide an overview of the Project's proposed environmental and fisheries protection measures.
